

SCENARIO 1: EAGLES, BOLTS AND BRICKS

The concept of "Eagles, Bolts & Bricks" is aiming to let the social and natural values flow into the industrial site, which has many potential areas that can be developed into attractive places, not just for tourism but mainly for the local people. The industrial site remains highly recognizable and also reserves more space for future economic development. The combination of the existing industrial structures and greenery environment would become the new engine for social community and economy.

SCENARIO 2: THE CURRENT – GIVING BACK WATER TO ALL SPHERES OF PEOPLE’S

The project invites the water back into the city creating a more sustainable and livable city for all where economy, equity and environmental aspects coexist. The challenge of making the river Durance more accessible to the community is tackled by bringing it into the site, slowing it down, making it safer and more attractive, while at the same time dealing with the flood problems happening both within the site and further down in the river system. Bringing in the water will not only deal with the folding issues, it will also provide with a new identity.

SCENARIO 3: LAND IN SHAPE – TRANSFORMATION OF ALPS INDUSTRIAL SITE INTO

On the basis of regional cooperation, resources of tourism, industry, education and local service are reallocated among the villages of the Ecrin region and the project area will play the role of a terminal service center with independent economic support from high-tech industry in the future. The new design proposes a complex living center with a human-friendly industry campus and a vivid community center on site, shaping the site and surrounding valley as continuous landscape. The landform of the project site is reshaped in an artificial way to pay respect to nature.
